

RELATIVE RISK:

Risk level 1 does not mean risk free, it means the lower risk option for the relative time horizon. For more information, please refer to the risk section on page two of the document.

DESCRIPTION:

The portfolio is designed for an aggressive investor who is prepared to risk some of their initial outlay in order to maximise returns. This strategy can result in heavy losses if markets fall and investors should therefore be prepared to commit their money for a few years in recognition of this.

To maximise the potential return, the portfolio is invested almost entirely in equities, with the vast majority of these consisting of blue chip stocks listed in the major developed markets of the UK, the US, Europe and Japan.

The portfolio does not hold any exposure to specialist equities as these are deemed too much of a gamble given the portfolio's short time horizon.

The portfolio may include some exposure to absolute return funds or property if they are viewed as an attractive opportunity. It may hold an allocation to bonds or to ultra-defensive money market funds during periods of higher volatility.

Investors should be aware that the portfolio's high-risk nature and short time horizon mean that it is possible investors could get back less than they originally invested if markets prove to be unfavourable. Overall the strategy will lead to strong returns in up markets, but investors must take into consideration the potential for heavy losses.

TIME HORIZON:

PAST PERFORMANCE OVERVIEW (NET OF FEES):¹

■ Portfolio (255.07%) ■ IA Flexible Investment (124.18%)

ASSET BREAKDOWN:²

DISCRETE PERFORMANCE TO LAST QUARTER END:

Period	0-12 Months	12-24 Months	24-36 Months	36-48 Months	48-60 Months
Portfolio	19.72%	11.38%	-11.70%	25.27%	6.75%
Benchmark	11.78%	3.29%	-7.09%	19.48%	0.31%

Past performance is not a guide to future performance and may not be repeated. The value of investments and the income from them may go down as well as up and investors may not get back the amount originally invested. History prior to March 2015 is synthetic history, it has been calculated using investments that were available at the time and would have been chosen for inclusion in this portfolio had it been running. All figures are calculated on a bid to bid total return basis in GBP, and is net of fund fees and includes FE's charge of 0.27%. Data from FEfundinfo 2024

RISK ANALYSIS:

The portfolio is managed to a risk target deemed appropriate for this portfolio by the actuarial firm EValue. Risk is measured using volatility which is the movement of the return around its average. The greater the swings in value the less consistent the performance of the portfolio and the higher the risk. Our aim is to match the risk target as closely as possible.

This portfolio has returned an annualised volatility of 12.9 per cent since June 2012. This figure includes the synthetic history from 2012 to 2015. This allows us to say that historically, over one year, the difference between the best and worst possible results would have been 51.6 per cent in 95 per cent of cases. A higher-risk portfolio would have a greater spread of returns, meaning the chances of both large losses and large gains increase, whereas a lower-risk portfolio would have a narrower spread of returns.

Lowest Month: -11.49% **Lowest Six Months:** -15.15% **Lowest Year:** -11.70% **Range of Monthly Returns:** -11.49% to 12.79%

RISK ILLUSTRATION:

The portfolio itself has only been running since 2015 and has synthetic performance back to 2012. To provide a better impression of how the portfolio might be expected to perform over the longer term we have provided simulated data back to the year 2004. The data shows that in a 20-year period this proxy for the portfolio's current investments lost money on four occasions, in 2008, 2011, 2018 and 2022. The biggest loss would have been in 2008, where over the year the portfolio would have lost 16.60 per cent; this equates to an investment of £10,000 falling to £8,340. This means over the period our proxy would have made money in 16 out of 20 years. The highest growth experienced was in 2016 when the asset allocations grew by 26.32 per cent. This means an investment of £10,000 would have been worth £12,632 at year end.

The data has been compiled by taking the portfolio's current strategic asset allocation, proposed by our actuaries as the most appropriate in order for the portfolio to deliver on its objectives over the length of investment. The asset allocation of the portfolio may differ slightly due to the nature of investing in active funds and the shorter term tactical positioning of the portfolio. Each asset class will be represented by a passive investment fund. The performance provides an illustration of how the current portfolio may have behaved, although historical positioning may have been different due to a variety of factors, including the input from our actuaries, the impact of fund selection and changes of asset allocation by the portfolio management team.

The average annualised performance of the asset allocation since 2004 has been 9.11%

POSSIBILITY OF LOSSES:

All investments necessarily include some risk that cannot be fully diversified away, meaning periods of loss will occur. It is important therefore that investors understand what the potential magnitude of these losses could be and whether they are comfortable with them.

The chart opposite analyses the current strategic asset allocation of the portfolio back over a 20-year period, looking at rolling one-year periods. For each of these periods we analyse what the largest loss the portfolio experienced during that period was and then plot the total occurrences. For instance, a chart that reads 5 per cent on the 'x' axis and 60 per cent on the 'y' axis would indicate that over any one year period there was a 60 per cent chance the portfolio fell by at least 5 per cent. It therefore shows what would happen if you invested at the top and sold at the bottom. Any recovery during the period is not considered.

All information presented on this page is only illustrative of what has happened in the past, it should not be seen as a guarantee that losses will not exceed past levels. Past performance is not a guide to future performance and you may get back less than you originally invested.

WHAT IT COSTS:³

Financial Instruments OCF: 0.46%

Financial Instruments Transactional Costs: 0.13%

Investment Services: 0.27%

Third Party Payments: 0.00%

Total Cost of Investment: 0.86%

The Financial Instruments OCF refers to the underlying costs of managing the funds. Transactional costs refers to additional costs which this does not capture such as trading fees, investment research and foreign exchange fees. It also includes implicit costs that can have an impact on performance but are not charged directly to the end investor. The Investments Services charge is the cost of managing the portfolio. Other charges may apply that cannot be factored into this report, for instance platform charges. **The charges represent the current maximum charges, for the exact charges please refer to the Platform Portfolio Charges Document and Platform Fund Charges Document.**

WHAT YOU'RE INVESTED IN:

■ iShares UK Gilts All Stocks Index (UK)

Weighting: 5.00% **OCF:** 0.11% **Transactional Costs:** 0.01%

This fund provides passive exposure to the FTSE Actuaries UK Conventional Gilts All Stocks Index and helps construct the fixed income portion of the portfolio. It has been chosen due to its exceptionally low costs compared to other passive funds and its ability to replicate the index as closely as possible. Gilts generally have a low correlation to other asset classes and this helps to increase the diversification levels of the portfolio.

■ GQG Partners U.S. Equity

Weighting: 13.00% **OCF:** 0.55% **Transactional Costs:** 0.48%

This fund aims for long-term capital growth by investing in highquality, attractively-priced companies exhibiting competitive advantages. The fund invests in a concentrated portfolio of mainly US-listed companies, but it can have an allocation to other markets. Its investment process evaluates each business with a focus on financial strength, sustainability of earnings growth and quality of management. The resulting portfolio seeks to manage the downside risk of equity investments while providing attractive returns to long-term investors over a full market cycle.

■ Brown Advisory US Sustainable Growth

Weighting: 9.00% **OCF:** 0.84% **Transactional Costs:** 0.16%

The managers aim to achieve long-term capital growth by investing in US companies that have outstanding business models and a sustainability focus that will directly benefit financial performance, specifically by increasing revenue growth and enhancing franchise value. Whilst looking for companies with structural growth characteristics, the fund managers also look to take valuations into account and avoid overpaying for growth.

■ FTGF ClearBridge US Equity Sustainability Leaders

Weighting: 7.00% **OCF:** 1.06% **Transactional Costs:** 0.13%

The investment process begins by identifying potential investments with attractive valuations, fundamental strength and capital discipline. Fundamental analysis and environmental, social and governance (ESG) research are conducted to identify companies with attractive risk/reward attributes, but that are also leaders in their sustainability approach. The resulting portfolio is comprised around 40 to 60 holdings. The fund aims to only invest in the best ESG-rated companies, as they are deemed to be leaders, or emerging leaders, in their sustainability approach. The fund has been added as we increase exposure to US growth companies.

■ HSBC American Index

Weighting: 19.00% **OCF:** 0.06% **Transactional Costs:** 0.00%

The fund provides passive exposure to the S&P 500 Index of large cap US companies and helps construct the global developed equity portion of the portfolio. It has been chosen because it provides low-cost exposure to US markets, which can prove difficult to beat using an active strategy. The fund replicates the index by holding all 500 stocks within it.

■ Vanguard Japan Stock Index

Weighting: 10.00% **OCF:** 0.17% **Transactional Costs:** 0.02%

This fund provides passive exposure to the MSCI Japan index and helps construct the global developed-equity portion of the portfolio. It has been chosen due to its exceptionally low costs compared to other passive funds and its ability to replicate the index as closely as possible. The fund does this by holding all (or substantially all) the stocks within the index. Japan generally has a low correlation to other equity markets and this helps to increase the diversification levels of the portfolio.

■ Fidelity European

Weighting: 8.00% **OCF:** 0.91% **Transactional Costs:** 0.07%

The managers of this fund look for companies that are expected to grow their dividend on a three- to five-year time horizon. They target companies that have sustainable margins and a strong balance sheet, and fund their dividends through organic growth rather than by taking on high levels of debt. Each company in the investable universe will have a score based on the analysts' view, the liquidity of the stock and the risk associated with the name. The fund is benchmark-aware, with sector weights close to that of the benchmark, and position sizing is based on both conviction and the benchmark weight. The resulting portfolio is around 40 to 50 stocks that exhibit sustainable dividend growth.

■ L&G US Index Trust

Weighting: 5.00% **OCF:** 0.05% **Transactional Costs:** 0.01%

This fund tracks the FTSE USA Index, which is comprised of the largest companies listed in the US. The fund tracks the index using a method called optimisation, where the fund invests in a selected basket of shares to closely mirror the performance of the index, which means the fund owns all the companies that make up the index. To supplement fund returns and compensate for the trading costs involved with direct ownership of the securities, the fund manager engages in stock lending. This is a common process in long-term investing, where a select third party borrows a limited amount of the passive fund's holdings, in exchange for a fee. Profits from stock lending reduce the effect of management fees and help to minimise overall tracking difference to the index. The fund has been added as exposure to large US companies has increased.

■ BlackRock Continental European Income

Weighting: 3.00% **OCF:** 0.91% **Transactional Costs:** 0.25%

The fund can be considered a core European holding within the international equity portion of the portfolio. It is run by Andreas Zoellinger, who focuses on generating a reliable and growing income while outperforming the wider market. The portfolio is split into two, with roughly 60 per cent invested in above-average, income-paying companies where it is believed the dividend is reliable and secure, and the remainder used to invest in companies with opportunity for dividend growth.

■ Man GLG Japan Core Alpha

Weighting: 2.00% **OCF:** 0.90% **Transactional Costs:** 0.23%

The fund focuses on large-cap, value investing in Japan. The managers believe that cyclicalities strongly influences every sector of the Japanese market, and that outperformance can be generated by exploiting extremes of valuation – buying stocks that are completely unloved and selling them when they become popular.

■ IFSL Evenlode Income

Weighting: 6.00% **OCF:** 0.78% **Transactional Costs:** 0.12%

This fund aims to provide investors with income and capital growth by investing predominantly in large UK dividend-paying companies. The managers' investment philosophy is to identify businesses with a large market share and/or competitive edges that can consistently generate high levels of recurring profits that can be returned to shareholders as dividends.

■ Fidelity Index UK

Weighting: 3.00% **OCF:** 0.06% **Transactional Costs:** 0.02%

This fund provides passive low-cost exposure to UK markets. The fund has been chosen for its exceptionally low charges and its ability to replicate the FTSE All-Share Index extremely accurately. The fund achieves this by holding all the larger shares and a representative selection of the smaller companies; this reduces costs and liquidity risks while not impacting its ability to match the index. The fund has been added as part of the reduction in value equities.

■ HSBC European Index

Weighting: 3.00% **OCF:** 0.05% **Transactional Costs:** 0.03%

This fund provides passive exposure to the FTSE Developed Europe ex-UK index and helps construct the global developed equity portion of the portfolio. It has been chosen due to its low costs compared to other passive funds and its ability to replicate the index as closely as possible. The fund replicates the market by holding all stocks within the index.

■ Royal London Short Term Money Market

Weighting: 3.00% **OCF:** 0.10% **Transactional Costs:** 0.02%

Cash is the safest and most defensive asset class available for use in the portfolios. Although the fund will offer little in terms of absolute performance it will provide substantial protection to the portfolio should there be a large market sell-off. It therefore makes it ideal for a portfolio of this risk level and time horizon, and allows higher risk investments elsewhere in the portfolio that over time will drive returns. The fund invests in short-term debt issued by companies with a term of 60 days or less and is one of five money market funds approved by FE Investments. The fund has been added to help protect the capital value of the portfolio in case risk assets fall in value if we enter recession.

■ Man GLG Income

Weighting: 4.00% **OCF:** 0.90% **Transactional Costs:** 0.31%

The objective of this fund is to achieve a level of income above the FTSE All Share Index as well as producing some capital growth through investing, directly or indirectly, primarily in UK equities. It may also invest in equities of companies which derive a substantial part of their revenues from activities in the UK.

External Risk Ratings

About FE Investments

FE Investments Portfolios: Our portfolios are a total investment solution designed to help advisers in achieving their clients objectives. FE Investments has produced a range of optimised portfolios which are designed to manage risk to achieve the desired outcome for investors.

The portfolios are optimised to maximise the overall level of diversification between different fund strategies. By analysing the relationships between funds we aim to find the best possible mix, where differing strategies are complementary and further reduce the total risk in the portfolio; thus allowing for greater market exposure for the same level of risk compared to a more traditional portfolio solution.

FE Investments produce fifteen growth portfolios that uses optimal asset allocation models from EValue as a reference for each level of risk. We optimise our portfolios to match the risk of the reference, to try and achieve greater returns and better capital protection. We use the asset allocation models as a guide but allow our portfolios to differ significantly where we are able to diversify away the extra risk. This approach has been developed internally by FE Investments and has been validated by Bayes Business School.

FE Investments Portfolios are constructed exclusively from funds that have made the FE Investments Approved List and have therefore gone through a rigorous vetting procedure. We've developed 15 growth portfolios, spanning three time periods and five risk levels, as well as a natural income solution which is outcomes orientated, as opposed to risk targeted.

FE Investments Approved List: Our recommended list of funds builds upon our established suite of research tools to help keep investors better informed. Funds initially undergo a rigorous quant screening to identify the best performers. This screening encompasses three distinct areas; Crown Ratings, Alpha Manager Ratings and Group Awards.

These three areas combined allow us to accurately scrutinize a fund from all angles. Our dedicated team of analysts overlay this quant analysis with their own independent and unique qualitative analysis. Funds that pass this rigorous two-stage quantitative and qualitative analysis process then make it on to the FE Investments Approved List.

Awards & Ratings For FE Investments

Important Information

1 Performance Overview: All performance figures are calculated on a bid to bid total return basis in pounds sterling to last month end.

2 Asset Breakdown: For this calculation a fund is assumed to invest 100% in any one asset class. For example a fund in the IA UK All Companies sector would be classified 100% UK Equity. A mixed investment fund would be classified as 100% Mixed.

3 What it Costs: The portfolio expense is calculated using the weighted value of the OCF of the portfolios constituent funds. Total cost of investment include FE Investments charges of 0.27%.

This marketing material is for general information only. It is not a recommendation to buy or sell any particular asset class, security or strategy. It does not contain all information an investor may require to make a decision. Investors who are unsure should speak to a financial adviser. Investors may get back less than originally invested.
